Through our strategy we aim to establish a reputation for providing high quality turnkey solutions in the respective areas of our services.

The company though new promises to excel, grow in domain and eventually credibility.

We aspire to be a long standing contender in the race to develop and better the economy

H

Health & Safety

Most companies agree they have an obligation to provide their employees with a safe and secure working environment. They create safety programs, insist on employee training and have occasional meetings.

But at Muscat Networks Company L.L.C, we take safety to the next level. We put the personal health and safety of our employees first – wherever they are. We will continue to address the environmental and health impact of our operations by reducing wastage, emissions and discharges, maintain awareness of HSE related matters.

We are committed to protect and safeguard the natural resources and the environment that we do business, live and enjoy our life in. HSE is our way of life and a [rime concern in everything we do. We aim to practice these vital elements in all aspects of our life and businesses with clearly defined policies and audits.

To emphasize our continuing commitment to HSE practices, we will adhere to Muscat Networks Company L.L.C.'s HSE principles. They are the cornerstone of the company's HSE culture and address issues such as accountability, training etc.

For us, safety is more than a policy manual or a training video; it's how we do business and its how we train each other to live. Our personnel are our greatest asset and the basis for our success. We believe that we owe our employees to keep them and their families, communities, our clients and our contractors healthy and happy.

When you join our company, you join a culture of caring. Muscat Networks Company will continue to take a proactive approach towards creating safer work environments for all direct employees and sub-contractors, also will be accountable for promoting continued safety education and training for all employees, assigning responsibility for all aspects of the program, continuously reviewing the program to identify potential threats and areas for improvement, and ensuring a thorough evaluation of all incidents.

P *erformance, Quality, Management*

The language of performance measurement includes terms such as effectiveness, efficiency, outcomes, outputs, productivity, quality, and inputs. It is essential to measure performance in construction projects to determine whether planned improvements in the efficiency and quality of facilities are being achieved, and to learn lessons for future projects. Improving performance requires more than learning from our own projects – it includes learning from the experiences of others.

Improving performance

Project evaluation and benchmarking: To measure construction effectiveness, we need to accumulate reliable data on quality, cost (design, construction and in-use costs) and time taken to deliver, together with data on health and safety, sustainability and design quality.

Key Performance Indicators (KPIs) Key Performance Indicators are indicators of the level of performance achieved relative to the original objective.

Examples of Key Performance Indicators

- **Defects** – rated on the impact of defects in the project at handover on a scale of 1-10
- **Safety** (accident incidence rate and accident frequency rate, AIR and AFR) – rate of reportable accidents per 100,000 employed
- **Predictability of cost of construction** – actual outturn cost compared with the figure agreed before construction started.

We take responsibility upon our shoulders as Muscat Networks Company employees – from our engineers to our construction crews – to strive for excellent execution of our work and to deliver superior value to everyone.

This is more than just a mission statement; it is the way we are trained to do business. To achieve the highest level of quality possible, we strive to exceed our clients' expectations. Our goal is to delight our customers and our intent is to build customer loyalty.

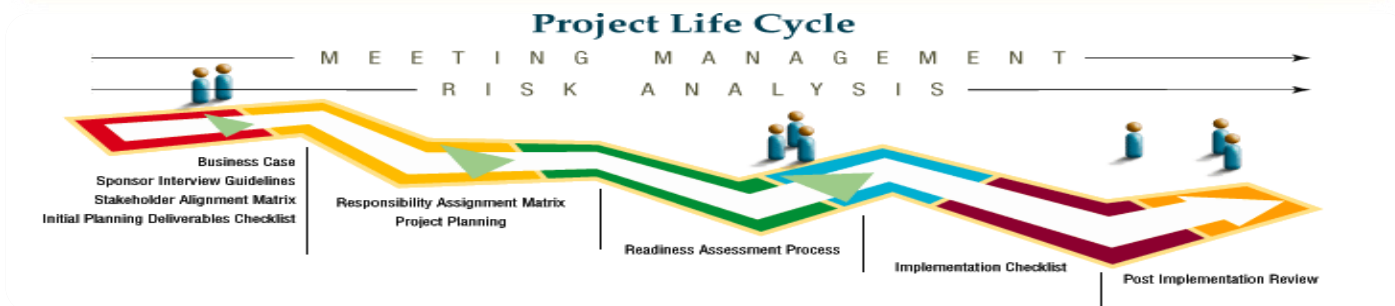

In fact, 90 percent of our work would be based on our relationship with our clients and their frequent businesses. Our loyal clients drive the growth of our company, which in turn allows us to provide growth opportunities for our people. Everyone benefits.

We plan to monitor customer satisfaction very closely through a survey process. Our scores would consistently exceed client expectations and we are intently focused on continuous improvement: improving our relationships with our clients; improving our performance on our work; and improving the future for our employees and their families.

We review projects and apply what we have learned to improve our performance.
