

Roof Structure Systems

KM-B : Screw Mounting

The KM-B Series is an alternate mounting system which utilizes a screw on bracket, suitable for installations where roof hooks cannot be deployed. The KM-B series is engineered for greater compatibility of shingle/slate roofs as well as metal sheeting and hence is a more matured innovation with great flexibility and practicality. In addition, the KM-B series enables easy installation of PV panels parallel to the roof.

Features

- Versatile design enables frame kit to be deployed on shingle/slate roofs and sheet metal trusses
- Mounting frame kit is inclusive of waterproof flashings to guard against water leakages
- Waterproof flashings and anti-water accessories are derived from EPMD based materials with UV ray protection ensuring long term reliability
- **Quick & Easy Installation:** Features easy to assemble precision cut mounting rails, clamps and all fastening accessories for quick, hassle free installation.
- **Engineered to Endure:** Undergone extensive and rigorous testing to resist and endure the environmental hazards of nature's events whilst adhering to all international structural standards to ensure lifelong reliability and performance.
- **Compatibility:** Designed for use on both shingle/slate roofing systems as well as selected sheet metal roofing types.
