

## The Clamp-Free Solar Racking System!

There's a better way to secure solar modules in place at a lower cost instead of using a traditional clamped racking system! The PV Racking clamp-free system is easy to install, saves panel installation time, is more secure, and better looking for ground and roof installations.

- ✓ Up to 30 kW can be installed by two people in a single day on ground mount systems
- ✓ Slide-in-place gravity held system holds the panel along the entire frame length which makes the system more secure
- ✓ No exposed edges or clamps, creating a sleek and smooth appearance

### About PV Racking

PV Racking was developed by innovative solar installers who were confident they could transform traditional labor-intensive clamped racking systems into sleeker, more effective clamp-less designs. The functionality of PV Racking is to both lessen the labor efforts of installers, and also provide a seamless structure that is aesthetically pleasing for a consumer's property.

## Specifications and Details

Attribute	Ground System	Roof System
Module Types	5 profiles to fit virtually all commercially available panels	5 profiles to fit virtually all commercially available panels
Module Configuration	Portrait / Landscape	Portrait / Landscape
Tilt Angle	0 - 45°	9° - 45°
Load	Up to 150 mph wind speeds* Up to 100 psf Snow loads*	Up to 150 mph wind speeds* Up to 100 psf Snow loads*
Material	Aluminum, Galvanized Steel, Stainless Steel Hardware	Aluminum, Stainless Steel Hardware
Foundation Support	Helical Piers, Concrete Footings, Ground Screws, Ballast Blocks	Fits most roof flashing systems
Warranty	15 year warranty	15 year warranty
*Wind and snow loads vary by locality, please refer to local codes and instruction manual for proper foundation spacing.		

**Tilt into place on the roof**

**Slide into place on the ground**
