Product Description

This household energy storage system is designed to couple with photovoltaic generation by utilizing long lifetime environment-friendly lithium iron phosphate battery as electricity carrier with output power up to 5kW as well as a flexible and efficient management system. Therefore, the electricity generated by the solar cells can be utilized under an off-line way, and also its redundant generation can be sold to the power grid to gain profit via an on-line mode. The facility is suitable for utilizations in houses with PV panels, small business buildings, office areas and some places where the price gap of peak and valley electricity is considerable.
