# salidomo®

## **Technical Data**

## Salt battery storage systems for the home with 9 kWh or 18 kWh

The **salidomo**° is an AC-coupled salt battery storage system that works with all PV inverters. The installed battery inverter capacity is 9 kVA. DC coupling of the photovoltaic system via our MPPTs is also possible.

With a **salidomo**° storage system, there is far more to gain than energy self-sufficiency, self-consumption optimisation and electricity cost reduction.

## The salidomo® will help you ...

- ... to store your energy safely, securely and innovatively.
- ... to make your contribution to the environment and climate change.
- ... to invest your money in a long-lasting resource-saving system.
- ... to use your electricity in a 100% sustainable and environmentally friendly way.
- ... to give your grandchildren a healthy future.

Further functions		
Self-consumption optimisation	integrated and configurable	
Breaking demand peaks (peak shaving)	integrated and configurable	
Automatic stand-by operation	with unloaded inverters	
Visualisation, data analysis, energy statistics	Web platform plus app for iOS + Android	
Battery monitoring	Remote monitoring of all batteries in real time	
Emergency power supply		
Mains independence	asymmetrical 3-phase operation	
Recharging by PV in off-grid operation	DC -> DC: Victron MPPT	
Separate emergency circuit	≤ 9 kVA freely definable	
Emergency power switchover	automatic (in under 20	milliseconds)

## Intelligent control

Potential-free contact for switching consumers on and off (charging station, heat pump, etc.)

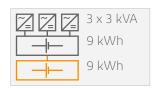

Time control for recharging the battery from the mains (calibration 100 % SOC)

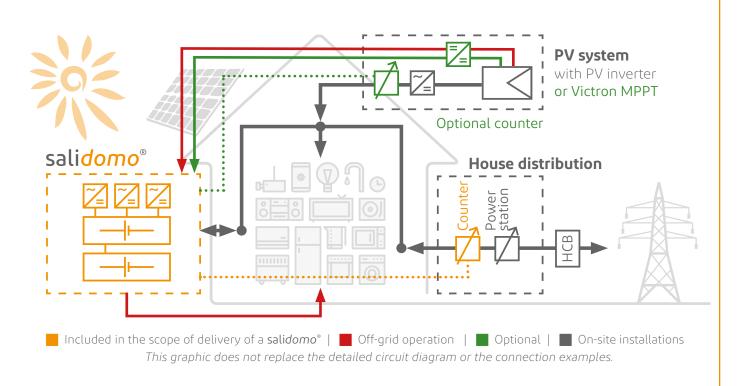

Lifetime-optimised operation of the battery (power limits)

## **Extension options**

The **salidomo**° can be expanded from 9 to 18 kWh at any time with the existing three inverters.

#### salidomo® 9/18

## Advantages of the salt battery

The salt batteries of the innovenergy® storage solutions are made of harmless materials: 32 % common salt, 22 % nickel, 22 % iron, 20 % ceramic.

The recycling of the salt battery has been standardised for 15 years. The metals are melted down and returned to the metal industry. The battery is manufactured 100% in Switzerland according to Swiss environmental and labour standards.

The salt battery is absolutely safe - the rooms do not need any fire protection or fire warning devices as the battery is neither flammable nor can it explode. It can also be operated in very cold and very warm rooms  $(-20^{\circ} \text{ to } +60^{\circ} \text{ C})$  without ventilation or air conditioning. The outside temperature does not affect the storage capacity or the service life.

The battery survives a total discharge without damage. The salt battery has a service life of at least 15 years (10-year quarantee) and is maintenance-free.

The salt battery is extremely robust and is used by the thousands in the telecommunications industry. In industry, it is considered a cheap and safe electricity storage technology in the long term. With innovenergy®, this technology is now also available for domestic use and for businesses.

## Recycling

The 100% recycling is carried out by the manufacturer itself. There, the complete battery is returned to its raw material cycle. The transport of the battery to be discarded back to the manufacturer in Stabio/CH is to be borne by the customer. Despite complete recycling by the manufacturer, INOBAT in Switzerland charges an advance recycling or disposal fee per battery.

### **Subsidies**

KFW subsidy in Germany is available with a 10-year current value guarantee.

#### Warranty

Provided that the installation and operating conditions are complied with, the salt battery is covered directly by the manufacturer with a time-value guarantee of 10 years. The battery inverters are covered by a 5-year warranty. Everything else is covered by a standard 2-year warranty. The warranty is an device warranty. Travel costs and working hours will be charged separately in the event of replacement or faults, unless you have subscribed to a service contract for the relevant year.

#### Norms
