```
MODULE TECHNOLOGY
HALF CUT & MICRO
GAP DESIGN
WITH ImPROVED SHADE TOLERANCE
```

CYLINDRICAL TABBING WIRE increases cell absorption by enhancing scattering effect

Implementation of bypass diodes in split JB series-parallel connections enable the module to perform in PARTIAL SHADOW CONDITIONS with respect to full-cell module

HIGHER NUMBER OF BUSBAR makes the PV modules less prone to loss in efficiency and increase tolerance to micro cracks
 FIELD RELIABILITY is improveddue to multiple contact points on the cell which lowers the cell stress during module fabrication

LCOE IS CUT BACK by using M12 size solar cell with adding more power output than lower size cell module

LOWER INTERNAL RESISTANCE boosts module power helping to achieve minimal power loss with respect to previous variant modules

GREAT AESTHETICS FOR DARK ROOFS ALL BLACK module can increase the aesthetic value of your home with a more modern design
