1. Scope

This specification only applies to the reference battery in this specification and manufactured by Changsha Lead Power Technology Co.,Ltd.

2 main parameters

	Item	parameters	Note
	Туре	LiFePO4 Battery	
	Cell Model	3.2V100Ah	LFP
	Nominal Capacity	100Ah	Discharge : 0.5C Cut-off Voltage:2.5V
h-#* o !!	Nominal voltage	3.2V	
包芯 Cell	Internal Impedance	0.27mΩ≤mΩR≤0.4mΩ	ACR
	Dimension	Max.49.9±0.5x116.3±0.5x160± 0.8mm	
	Weight	Approx.1926±30g	
	Pack Method	16S1P	
	Nominal Capacity	100AH	Discharge : 0.5C Cut-off Voltage:40.0V
	Nominal Voltage	51.2V	
	Energy	5120Wh	
	Charge Voltage	58.4V	
	Discharge cut-off voltage	40.0V	
	Charge Method	cc/cv	
	Standard Charge Current	50A	
	Max. Charge Current	100A	
	Standard Discharge Current	50A	
	Max. Continues Discharge current	100A	
	Cycle Life	6000 times	
Batterypack	Internal Impedance	≤25mΩ	
	Dimension	L602xD413XH153mm	
	Output Wire	/	
	Output Connector	FQH-M8-M6-250A-C	Charge discharge port
	Communication	RS485/RS232/CAN	
			l .

Weight	Approx.49kg	
Working Temperature Range	Charge: 0°C45°C Discharge: -20°C60°C	
Storage Temperature	-10°C50°C	

3 BMS Parameters

3.1 main parameters setting

No.		Item	Default parameters	Setting or not	note
		Alarm voltage	3600mV	Yes	
	Cell overcharge	Protection voltage	3700mV	Yes	
	protection	Protection time delay	4.05	Yes	
1	Cell overcharge	Released voltage	3380mV	Yes	
	protection released	Released Capacity	SOC < 96%	Yes	
		Discharging released	Discharging curre	ent > 1A	
	Cell over discharge	Alarm voltage	2800mV	Yes	After 30 seconds of
	protection	Protection voltage	2500mV	Yes	over-discharge
2		Protection time delay	1.05	Yes	protection, if it still
	Cell over discharge	Released voltage	2900mV	Yes	cannot be recovered, it
	protection released	Charging	Connect with	charger	will enter the low
		Alarm voltage	57.6V	Yes	
	Pack overcharge	Protection voltage	59.2V	Yes]
	protection	Protection time delay	1.05	Yes]
3	Pack overcharge	Released voltage	54V	Yes]
	protection released	Released Capacity	SOC < 96%	Yes]
		Discharging released	Discharging current > 1A		
	Pack over discharge	Alarm voltage	44.8V	Yes	After 30 seconds of
	protection	Protection voltage	40V	Yes	over-discharge
4		Protection time delay	1.05	Yes	protection, if it still
	Pack over discharge	Released voltage	46.4V	Yes	cannot be recovered, it
	protection released	Charging	Connect with	charger	will enter the low
	Over charge current	Alarm current	105A	Yes	10 times consecutive
	protection	Protection current	110A	Yes	occurrences will lock
5		Protection time delay	1.05	Yes	this state and will no
	Released over charge	Automatic release	After 1min		longer be automatically
	current protection				released
		Charging	Discharging current > 1	A	
	Over discharge current	Alarm current	105A	Yes	10 times consecutive
	protection 1	Protection current	110A	110A Yes	
		Protection time delay	1.05	1.0S Yes	
6	Released over discharge current protection 1	Automatic release	After 1min		be automatically released

		Charging release	Discharging current > 1A		
	Over diashavas avvasat	Protection current	≥250A	Yes	10 times consecutive
7	Over discharge current protection 2	Protection time delay	100mS	Yes	occurrences will lock
	Released over	Automatic release	After 1min	•	longer be automatical
	discharge current	Charging release	Discharging current > 1A		
		Protection current	≥350A		
	short-circuit	Protection time delay	≤300µS		
8	protection	·	charging		
		Protection released	Off load		
	MOS High	Alarm temperature	90℃	Yes	
9	temperature	Protection Temperature	110°C	Yes	
	protection	Released temperature	85°C	Yes	
	<u>'</u>	Low temperature charging	0°C	Yes	
		Low temperature charging	00	res	
		Low temperature charging Protection	-5℃	Yes	
		Low temperature charging Protection released	0℃	Yes	
		High temperature charging alarm	55℃	Yes	
10	Cell temperature	High temperature charging Protection	60℃	Yes	
	protection	High temperature charging Protection released	50℃	Yes	
		Low temperature discharging alarm	-15℃	Yes	
		Low temperature discharging Protection	-20℃	Yes	
		Low temperature discharging Protection	-15℃	Yes	
		High temperature discharging alarm	60℃	Yes	
		High temperature discharging Protection	65℃	Yes	
		High temperature discharging Protection	55℃	Yes	
	Ambient temperature	Low temperature alarm	-15℃	Yes	
	protection	Low temperature protection	-20℃	Yes	
11		Low temperature protection released	-15℃	Yes	
11		high temperature alarm	65℃	Yes	
		High temperature	75℃	Yes	
		High temperature protection released	65℃	Yes	

12		current	≤40mA (without display)		
		Low Energy running mode	≤100µA		
13	Balancing	Pack voltage difference	3500mV	Yes	open
	Balaneing	Cell Voltage difference	30mV	Yes	
14	Default capacity	Low capacity alarm	SOC < 5%	Yes	There is no alarm when charging
15	Sleep feature	sleep Voltage	3150mV	Yes	
		Time delay	5min	Yes	
16	Cell failure protection	Monomer pressure difference	>1V	NO	Charging and discharging are not allowed
17	Full charge judgment	Full charge voltage	>56V	Yes	It is judged as full
17		Cut off current	<25A	Yes	charge if the charging voltage and current meet at the same time

3.2.LED instruction

Table 1 LED Working status indicator

Status	Normal/Alarm /Protection	ON/ OFF	RUN	ALM		LED status					Note
Shutdown	Sleep	Off	Off	Off	Off	Off	Off	Off	Off	Off	All off
Standby	Normal	Normally on	flicker 1	Off		The	battery	capacity	status		
	Alarm	Normally on	Flicker1	Flicker3							Low voltage
	Normal	Normally on	Normally on	Off		ittery cap	-	tus (max	(Over charge status, the ALM light will
Charging	Alarm	Normally on	Normally on	Flicker3	not flicker		not flicker				
Charging	Over charge protection	Normally on	Normally on	Off	on	on	on	on	on	on	If no charging, the LED status will be standby
	Temperature, over current, failure protection		Off	Normally on	Off	Off	Off	Off	Off	Off	Stop charging
	Normal	Normally on	Flicker3	Off		The	battery	capacity	status		
Discharging	Alarm	Normally on	Flicker3	Flicker3							
	Low voltage protection	Normally on	Off	Off	Off	Off	Off	Off	Off	Off	Stop discharging
	Temperature, over current 、 failure protection	Normally on	Off	Normally on	Off	Off	Off	Off	Off	Off	Stop discharging

Failure	OFF	Off	Normally	Off	Off	Off	Off	Off	Off	Stop charging or discharging
			on							

Table 2 battery capacity status specification

sta	tus				charging	S				disch	arging		
		L6	L5	L4	L3	L2	L1	L6	L5	L4	L3	L2	L1
Capacity	LED light	•	•	•	•	•	•	•	•	•	•	•	•
	0~16.6%	Off	Off	Off	Off	Off	F2	Off	Off	Off	Off	Off	ON 1
	16.6~33.2%	Off	Off	Off	Off	F2	On 1	Off	Off	Off	Off	On 1	On 1
capacity (%)	33.2~49.8%	Off	Off	Off	F2	On 1	On 1	Off	Off	Off	On 1	On 1	On 1
capacity (707	49.8~66.4%	Off	Off	F2	On 1	On 1	On 1	Off	Off	On 1	On 1	On 1	On 1
	66.4~83.0%	Off	F2	On 1	On 1	On 1	On 1	Off	On 1	On 1	On 1	On 1	On 1
	83.0~100%	F2	On 1	On 1	On 1	On 1	On 1	On 1	On 1	On 1	On 1	On 1	On 1
Ru	nning LED •			Norm	ally on					F	3		

Note: F2: flicker 2 ; On 1: normally on ; F3: flicker 3

Table 3 LED flicker status

Flicker model	on	off
Flicker 1	0.25S	3.75S
Flicker 2	0.5S	0.5S
Flicker 3	0.5\$	1.5S

3.3 Description of buzzer action

Fault: Every second, Buzzer works 0.25S;

Protection: Every 2 seconds, Buzzer works 0.25S; (except over voltage protection)

Alarm: Every 3 seconds, Buzzer works 0.25S; (except over voltage protection)

The buzzer function can be enabled or disabled by the host computer, and the factory default is disabled.

3.4 Buttons Description

When the BMS is in the sleep state, press the button (3~6S) and release, the protection board is activated, and the LED indicator lights up in sequence from "RUN" for 0.5 seconds.

When the BMS is activated, press the button (3~6S) and release it, the protection board is dormant, and the LED indicator lights up in order from the lowest battery light for 0.5 seconds.

When the BMS is in the activated state, press the button (6~10S) and release it, the protection board is reset, and the LED lights are all lit simultaneously for 1.5 seconds.

After the BMS is reset, the parameters and functions set by the host computer are retained. If you need to restore the initial parameters, you can use the "restore default value" of the host computer to achieve, but the related operating records and stored data remain unchanged (such as power, cycle number, Record protection, etc.)

3.5 Sleep and wake up status

3.5.1 Sleep status

When any of the following conditions are met, the system enters a low-power mode:

- 1) The single or overall over-discharge protection has not been released within 60 seconds.
- 2) Press the button (3~6S) and release it.

- 3) The lowest monomer voltage is lower than the sleep voltage, and the duration reaches the sleep delay time (at the same time, no communication, no protection, no balance, no current).
- 4) Standby time exceeds 24 hours (no communication, no charge and discharge, no commercial power).
- 5) Forced shutdown by the host computer software. Before entering sleep, make sure that the input terminal is not connected to an external voltage, otherwise it will not be able to enter the low power consumptionmode.

3.5.2 Wake up status

When the system is in low-power mode and meets any of the following conditions, the system will exit low-power mode and enter normal operation mode:

- 1) Connect the charger, and the charger output voltage must be greater than 51.2V.
- 2) Press the button (3~6S) and release it.
- 3) RS232 communication is activated (this method cannot wake up the motherboard due to over-discharge).

Remarks: After single or total over-discharge protection enters low power consumption mode, it wakes up regularly every 4 hours and turns on charge and discharge MOS. If it can be charged, it will exit the sleep state and enter normal charging; if it can not be charged after 10 consecutive automatic wakeups, it will no longer automatically wakeup.

When the system is defined as the end of charging, the recovery voltage has not been reached after 2 days of standby (standby time setting value), and the charging is forced to resume until the end of recharging.

4 Appearance

It shall be free from any defects such as scratch, distortion, contamination and leakage.

5 Performance

- 5.1 Standard Test Condition
- 5.2 The battery shall be evaluated within 1 month from the arrival date.
- 5.3 Unless otherwise stated in these specifications, the following test shall be carried out in an ambient temperature of $20\pm5^{\circ}$ C, relative humidity of 65 $\pm20\%$
- 5.4 Discharge capacity when the battery is discharged at 50A to 40.0V after being standard charged. Five cycles are permitted for this test. The test shall be terminated at the end of the first cycle which meets the requirement.
- 5.5 Testing Instrument or Apparatus
- 5.5.1 Dimension Measuring Instrument

The dimension measurement shall be implemented by instruments with equal or more precision scale of 0.01mm specified.

5.5.2 Voltmeter and Ammeter

Voltmeters and ammeters shall be equal or more precision instruments of $10 k\Omega/V$ and 0.01Ω .

5.5.3 Impedance Meter

Impedance shall be measured by a sinusoidal alternating current method (1kHz LCR meter)

5.6 Electrical Performance

Item	Condition	要求 Specification
Open-Circuit Voltage	The open-circuit voltage shall be measured within 24hours after standard charge	≥52.8V
Battery Capacity	The discharge time at 50A shall be measured after standard charge at 20±5 °C and rest 30mins	≥100%
Cycle Life	The discharge time on standard discharge shall be measured after 6000 cycles of standard charge and	≥80%
	discharge at 20±5℃, 0.5C charge and discharge.	

Charge(capacity) retention	The discharge time at 50A shall be measured after standard charge and then storage at 20±5 $^{\circ}\mathrm{C}$ for 28days	≥90%
Temperature Characteristic1	After standard charging at $20\pm5^{\circ}$ C, laying the battery at 55 $^{\circ}$ C for 2hour, then discharge at 50A to 40.4V, record the discharge time	
Temperature Characteristic2	After standard charging at 20±5 $^{\circ}$ C, laying the battery at -10 $^{\circ}$ C for 4hour, then discharge at 50A to 40.0V, record the discharge time	≥60%

6 Mechanical Performance

Item	Condition	Specification	
Crush Test	A battery is to be crushed between two flat surfaces. The force for the crushing is to be applied by a hydraulic ram with a 32mm diameter piston. The crushing is to be continued until a pressure reading of 17.2mmPa is reached on the hydraulic ram, applied force of 13kN. Once the maximum pressure has been obtained it is to be released.	No fire, No explosion	
Drop Test		No explosion, No fire, No smoke	
Vibration	A full-charged battery is to be subjected to simple harmonic motion with an amplitude of 1.6mm total maximum excursion. The frequency is to be varied at the rate of 1 hertz per minute between 10 and 55 hertz. The cell shall be vibrated for 30 minutes per axis o XYZ axes.	explosion	

7 Cell Safety Performance

Item	Condition	Specification
	At 20±5°C, charging battery with constant current 1C to voltage 4V, then with constant voltage 4V till current decline to 0.	No explosion, No fire

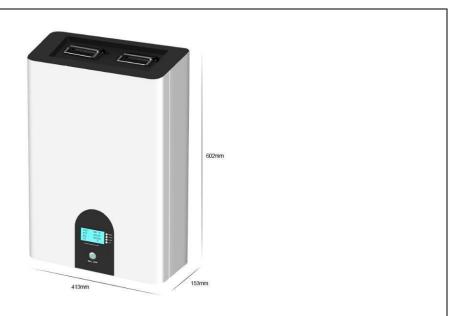

Over discharge	At 20±5 $^{\circ}$ C, according to the requirement of the standard of discharge after discharge to termination voltage, 30 m $^{\circ}$ C external load discharge within 24 hours.	
Short-circuit	At 20±5 $^{\circ}$ C, Standard charge, across the electrodes of the battery with a less than 50 m Ω wire connection, 6 hours	No explosion, No fire The temperature of the surface of the cell are lower than 150 $^{\circ}\mathrm{C}$
Heating	Battery is heated in a circulating air oven at a rate of $5\pm2^{\circ}{\rm C}$ per mins to $130^{\circ}{\rm C}$, an then placed 30 mins at $130^{\circ}{\rm C}$	No explosion, no fire

8 Delivery Conditon

Approx. 20-50% charged Shipment voltage: 51. 5-53. 6V

9 Pack Drawing

Remarks:

1.Dimension: L602xD413XH153mm

2.FQH-M8-M6-250A-C

3.Rocker switch 19A-CS-01- 5A250V

4.Iron box color: white

To prevent the possibility of the battery from leaking, heating, fire, Please READ this specification carefully before usage and observe the following precautions:

- When recharging, use the LiFePO4 battery charger specifically for that purpose
- O Do not strike battery with any sharp edge parts, such as Ni-tabs, pins and needles
- O Do not immerse the battery in water and seawater
- O Do not use and leave the battery near a heat source as fire or heater
- O Do not reverse the position and negative terminals
- O Do not connect the battery to an electrical outlet
- O Do not discard the battery in fire or heat it
- © The battery tabs are not so stubborn especially for aluminum tab. Do not bend tab.
- On not short-circuit the battery by directly connecting the positive and negative terminal with metal object.
- O Do not transport and store the battery together with metal objects such as necklaces, hairpins etc.
- © Do not directly solder the battery and pierce the battery with a nail or other sharp object.

1. Battery operation instruction

11.1 Charging

Charging current: Do not surpass the biggest charging current which in this specification. Charging voltage: Do not surpass the highest voltage which in this specification.

Charge temperature: The charge temperature is in according to this specification.

11.2 Dischargin

Discharge current: Do not surpass the biggest discharge current which in this specification. Discharge voltage: Do not be less than the lowest voltage which is in this specification.

Discharge temperature: The discharge temperature is in according to this specification,

11.3 Over-discharges

After the short time excessively discharges charges immediately cannot affect the use, but the long time excessively discharges can cause the battery the performance, battery function losing. The battery long-term has not used, has the possibility to be able to be at because of its automatic flashover characteristic certain excessively discharges the condition, for prevented excessively discharges the occurrence, the battery should maintain the certain electric quantity.

11.4 Storing the Batteries

The battery should store in the product specification book stipulation temperature range. If has surpasses above for 3 months the long time storage, suggested you should carry on additional charge to the battery.

11.5

Please do not continuously charge the battery over 8hours.

12. Others

- © TIf the customer needs to use the battery in equipment beyond the specified conditions, or under conditions beyond the specified conditions, the customer should contact VSTC in advance, as specific experimental tests are required to verify the performance and safety of the battery under such conditions.
- © We are not responsible for any accidents caused by the use of batteries in conditions beyond those specified in the documents.
- © If necessary, we will inform the customer in writing of the improvement measures for the correct operation of the battery.
 - O Any matters not mentioned in this Manual shall be determined by both parties through negotia
