Low-carbon green steel

THE ADVANTAGES OF THE HELIOS RC3 SYSTEM.

- High-quality integration system: better module load-bearing capacity, 100% steel/aluminum
- Innovative system: clipped gutters; custom rails with the possibility to slide in rails to slopes > 13m
- Fastening is done from underneath the canopy, no climbing or lifts required (subject to std heights)
- All modules are slid-in between rails one by one from the bottom towards the top, fast and easy installation
