

Product name: Solar Structure L Foot Mount Kit

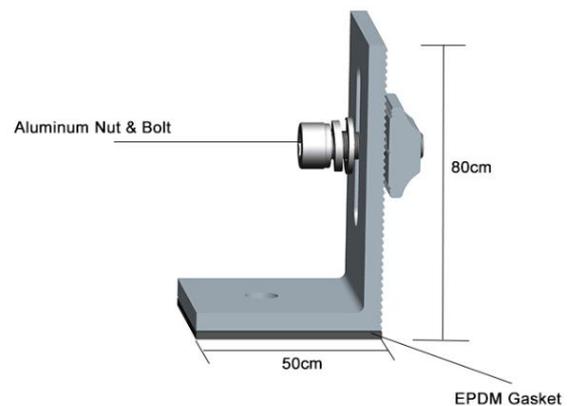

Summary

Solar Structure L Foot Mount Kit is a crucial component in solar mounting systems. Made of aluminum alloy, it provides pretty quality and light weight, making it a hot choice for pv rooftop mounting structure. It confit for both flat and pitched roofs, it's easy and fast to install and a key Accessories in structural safety.

Product Name	Solar Structure L Foot Mount Kit
Product Material	Aluminum Alloy
Product Function	PV Solar Rooftop Installation
Service Life	25 years

Product description

Solar Structure L Foot Mount Kit has two ends that do different jobs: one end locks onto the roof or whatever surface you're installing it on, and the other end holds up the solar panel nice and steady. To installing it to the roof, you just use bolts or screws. The structure stays put, giving the solar module a solid base.

Solar L feet Kits:

Solar L feet work on all kinds of roofs too. Whether your roof has tiles, is made of metal, or is plain concrete, this bracket fits right in—no need to change how your roof is built. You can usually get them in two colors: silver or black. This way, it can match how your roof looks without sticking out.

Brand Name	Top Energy
Product Name	Solar Structure L Foot Mount Kit
Surface Treatment	Anodized
Color	Silver or customized
Material	Aluminum Alloy
Warranty	15 years
Our Service	Professional Customization service

1. The installation of [Solar Structure L Foot Mount Kit](#) is simple and can be installed by one person, saving a lot of labor construction costs.
2. We have matching fasteners and nuts, saving time and cost of purchasing additional parts.
3. [Solar L feet](#) are equipped with high-quality EPDM rubber pads, which are not only waterproof but also durable and have a long service life.
4. All components are evaluated to ensure superior structural performance and compatibility with most solar modules.

Application Case
