

## Aluminum Solar Panel Clamps

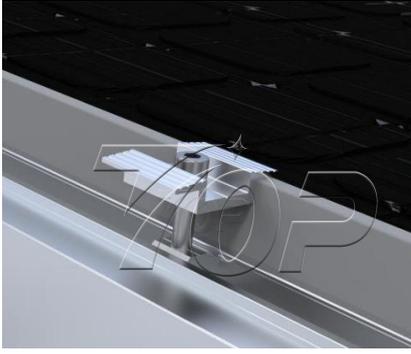

Solar Panel Clamps are essential components in a solar mounting system, they use to secure the solar panels to the mounting structure and keep them in place, Enhance the stability of whole pv system.

|                |   |
|----------------|---|
| Product Name   | Solar Panel Clamps                        |
| Materials      | Aluminum 6005-T5, SUS304                  |
| Component List | clamp, sliding nut, bolt, spring washer.. |
| Package        | 400pcs per carton (accept customize)      |
| Certificate    | SGS reports, CE                           |
| Duration       | More than 25 Years                        |

Solar Panel Clamps are made of aluminum materials with anodizing surface treatment, with stainless steel bolts, nut and spring washer. The Clamps can use for solar panels from 30mm to 50mm thickness. You will need two Mid clamps for each panel you intend to install and two End clamps for each row. Each Clamps come with a hexagon socket bolt, a sliding nut, and a spring washer.

Topfence Solar have a variety of middle clamps and end clamps in different designs to meet the different needs from customers.

The installation of solar mounting systems usually requires a large amount of Solar panel clamps,

Top Energy always try to minimize our profit and working hard to optimize the solution to meet customer expectations and create greater profit space for them. Please contact us to get offer and solution for your project!
