

Grounding Clip

Material: SUS304

Color: Silver

Application

Solar grounding clip is installed between PV module and rail for electricity safety.

Feature

Excellent Conductivity: Solar grounding clip is made of highly conductive stainless steel 304 to provide superior conductivity, with corrosion prevention, suitable for various environments.

Common Earth Grounding: By grounding the PV panel to a common earth, it helps to mitigate the risk of electrical faults, promote system stability.

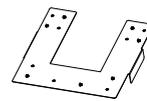

Strong Compatibility: We offer full product range and support customization, ensuring seamless integration with your solar mounting system. The connection ensures a secure and reliable electrical path, promoting optimal performance and safety in your PV system.

Easy Installation: Installed between PV module frame and the support rails without tools, ensure proper grounding of PV panels, easily realize current conduction between frame and mounting rail.
