

Medium Level Ground Mounts

N-Type

An all galvanised steel structure to provide a convenient mounting array for your bank of solar modules. The basic structure provides a way of mounting up to 6 modules onto a single structure and can be positioned end to end for larger arrays. The tilt angle is set using centrally mounted U bolts, so can be set at any angle from 10° - 60°.

A simple foundation is required for each leg, and the slotted base plate allows for 20° of horizontal rotation for easy positioning. The structure is supplied with all fasteners and an installation manual. An optional foundation kit can be supplied prior to delivery, which includes a set of ground anchor rag bolts and a wooden template. This allows the foundations to be prepared in advance, minimising installation time.

Product Information

- Material/Finish: Mild steel, hot dip galvanised to BS EN ISO 1461
- Fasteners: A4 stainless steel and galvanised steel
- Tilt Angles: 10° - 60°
- Suitable for: Most modules over 80W
