

## H-Type

The H-Type structure is for the larger systems. It provides a heavy duty mounting array for system of 12 modules or more. The structure is basically a continuous add on system that allows you to add an extension or extensions onto either side of the original structure, so should you require more modules these can be added with ease.

The structure provides high level mounting for the modules, with an adjustable tilt angle. Each kit is supplied with all fasteners including ground anchor bolts and a comprehensive manual. This structure has been in use for over 15 years and has provided power for many systems including telecomms, cathodic protection and remote power.

### Product Information

- Material/Finish: Mild steel, hot dip galvanised to BS EN ISO 1461
- Fasteners: A4 stainless steel and galvanised steel
- Tilt Angles: 10° - 60° in 5° increments
- Suitable for: Most modules
