

Brentwood heavy duty industrial quad shaft shredders are the ideal solution for difficult to grab products or where sizing of the end product is required. We can supply units up to 110kW with a wide selection of cutters, and various feed and discharge arrangements. Brentwood can customise a shredder to suit your particular shredding requirements.

Sizes from 15kW to 110kW

High torque/low speed = low maintenance

Available with removable screens for product sizing

Planetary gearboxes for exceptional duty cycle and low noise

High surface hardness and core strength, repairable alloy cutters

Hexagonal alloy shafts for superior strength

Standard with DOL start. Brentwood SMART START or ECO Vari Drive also available.

Close tolerance cutting action

Permalube system to keep bearings lubricated

Australian made for Australian conditions

Fast access to spares and service

Brentwood heavy duty industrial quad shaft shredders are available in a wide range of sizes and configurations.

We can customise a shredder to suit your throughput and sizing requirements. We can also supply infeed, discharge and plant solutions to integrate with your shredder.

Options

Cutters	Brentwood cutters can be supplied in various widths and hook configurations. The choice of cutters is determined by the throughput and material size requirements, machine size, and the material to be shredded. Brentwood cutters are manufactured from a high strength alloy steel that is hardened to 60RC. Brentwood cutters are repairable and in many cases can be fully reconditioned by Brentwood.
Cutting Chamber Lengths	Our standard cutting chamber lengths are noted above however most Brentwood shredders can be supplied with longer or shorter cutting chambers. This can be advantageous when integrating the shredder to existing plant or if greater throughput is required.
Sizing screens	Quad shaft shredders can be fitted with removable sizing screens. These screens enable shredded material to be recirculated in the cutting chamber until they reach a suitable size to drop through the screen. The use of a sizing screen reduces the throughput by around 25%. Screens are available in a range of sizes to suit the cutter size and the application.
Hoppers	Brentwood shredders can be supplied with a range of hoppers to suit different feed requirements and materials. Hoppers can be customised to your requirements.
Stands	Our standard range of stands are designed to suit most applications however we can customise a stand as required.
Control Panels	Brentwood shredders are supplied with a DOL (Direct on Line) control panel as standard. This panel contains our shredder control card which monitors and protects the shredder. We can also supply our Brentwood SMART START panel where starting currents may be an issue, or our Brentwood ECO VARI-DRIVE system for the ultimate in shredder control and monitoring and power usage reduction.
Infeed and Discharge Systems	Brentwood manufacture a full range of conveying systems that can be integrated with your shredder to create a full turn key plant solution. We can design full plants to shred, convey, sort, and recover solid waste streams.
Spare Parts	Brentwood carry a wide range of parts for our shredders. Call our Spare Parts Team for all your parts requirements
Service	With regular scheduled maintenance, your Brentwood shredder will give many years of trouble free service. We can advise on a maintenance plan for your machine or we can offer our full service capabilities to maintain your machine for you.
